

SCP Therapy: PRP 2.0

Supercharge Your Healing Process

STEMCELLARTS

The Art & Science of Regenerative Medicine

AN AFFILIATE OF NATIONAL SPINE AND PAIN CENTERS®

What SCP Can Do For You

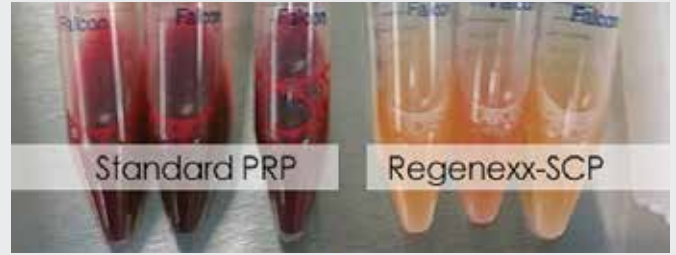

The StemCell ARTS family of stem cell and platelet procedures offers Regenexx™ SCP (Super Concentrated Platelets) as an alternative solution to invasive surgery for patients suffering from a wide range of degenerative conditions and painful injuries such as:

- Osteoarthritis of the Knee, Shoulder, Hip and Spine
- Rotator Cuff Tears
- Chronic Plantar Fasciitis
- ACL Injuries
- Pelvic Pain and Instability
- Back and Neck Injuries
- Tennis Elbow
- Ankle Sprains
- Tendinitis
- Ligament Sprains

Our procedures are prescribed for people looking for a safe, minimally invasive alternative to surgery with little or no downtime.

The StemCell ARTS Difference

- Our providers have decades of experience and are highly regarded as significant contributors to advancing the techniques the “art” of regenerative medicine therapy.
- We have an advanced in-house laboratory that allows for custom-designed, individual treatments.
- Our superior accuracy and precision performance uses advanced imaging guidance and ultrasound techniques during procedures.
- We utilize a sophisticated tracking registry of patient treatments and outcomes.

SCP VS. PRP Therapy

One can hardly read the paper or listen to the news without hearing about sport stars such as Tiger Woods and Kobe Bryant having therapeutic PRP (Platelet Rich Plasma) treatments for their sports injuries. StemCell ARTS takes PRP a step further. The Regenexx™ SCP (Super Concentrated Platelets) procedure supercharges the body's platelets so they can help you heal. The SCP therapy yields a much higher and purer concentration of platelets through a proprietary procedure developed as part of the Regenexx processing protocol. The SCP process not only delivers platelets in a higher concentration than PRP, it also excludes red and white blood cells that can inhibit healing and cause excess inflammation to the injured site.

Extensive research has proven that these super concentrated platelets (SCP) contain healing growth factors. This high concentration of platelets promotes faster healing of damaged tissue and encourages the body's natural ability to heal itself. A simple blood draw is processed and readied for the patient's re-injection at the site of injury. No painful surgery, no risky anesthesia and no protracted recovery period.

Why Choose StemCell ARTS?

Our medical leaders at National Spine and Pain Centers have established StemCell ARTS, a program that offers the most cutting-edge regenerative therapies in the Mid-Atlantic region. At StemCell ARTS, we not only have a team of Top Doctors* to treat you, we offer the latest in advanced biologic solutions such as Stem Cell Therapy, Platelet Rich Plasma (PRP), Prolotherapy, and Platelet Lysate procedures.

We utilize the most advanced protocols developed by Regenexx™, the national leader in these techniques. Regenexx is considered the most advanced method of processing blood platelets and stem cells and this assures optimal therapeutic benefits. In fact, the Regenexx protocols that StemCell ARTS utilizes have the highest number of patients treated and the only outcome data available, in the country, on these procedures.

Contact us today to see if you are a candidate for this ground-breaking treatment.
