

Platelet Lysate Therapy

The Alternative to Back Surgery
and Epidural Steroid Injection

STEMCELLARTS

The Art & Science of Regenerative Medicine

AN AFFILIATE OF NATIONAL SPINE AND PAIN CENTERS®

Explore How Regenerative Medicine Can Help You Put Pain in the Past

The World's Most Advanced Regenerative Medicine Techniques (Regenexx™)

StemCell ARTS, an affiliate of the National Spine and Pain Centers, offers a family of non-surgical, adult stem cell and blood platelet treatments for common injuries and degenerative joint conditions such as:

- Pinched Nerves
- Nerve Entrapment
- Spinal Disc Pain
- Carpal Tunnel Syndrome
- Bulging/Herniated Discs

Our procedures are prescribed for people looking for a safe, minimally invasive alternative to surgery with little or no downtime.

The StemCell ARTS Difference

- Our providers have decades of experience and are highly regarded as significant contributors to advancing the techniques the “art” of regenerative medicine therapy.
- We have an advanced in-house laboratory that allows for custom-designed, individual treatments.
- Our superior accuracy and precision performance uses advanced imaging guidance and ultrasound techniques during procedures.
- We utilize a sophisticated tracking registry of patient treatments and outcomes.

What is Platelet Lysate Therapy?

Every year, millions of people undergo painful, expensive surgeries for back and spine pain. Often spinal surgery does achieve desired results, but patients may still experience residual pain, muscle spasms, and loss of activity following the surgical procedure.

Regenexx™ Platelet Lysate Therapy is a non-surgical treatment that helps patients avoid lower back surgery and provides an alternative to high-dose epidural steroid injections.

The Platelet Lysate procedure utilizes the patient's own natural growth factors to treat bulging and/or herniated disc-related problems. PL therapy is an advanced platelet injection procedure that can offer relief from lower back pain, buttock and leg pain or numbness and tingling in the legs and/or feet. Platelet Lysate therapy is minimally invasive and has a very limited recovery period. In addition, studies show that Platelet Lysate therapy can be more effective and longer lasting when compared to steroid epidural injections. At StemCell ARTS, we have made a commitment to offer the latest scientifically sound regenerative procedures to treat difficult pain conditions.

Why Choose StemCell ARTS?

Our medical leaders at National Spine and Pain Centers have established StemCell ARTS, a program that offers the most cutting-edge regenerative therapies in the Mid-Atlantic region. At StemCell ARTS, we not only have a team of Top Doctors* to treat you, we offer the latest in advanced biologic solutions such as Stem Cell Therapy, Platelet Rich Plasma (PRP), Prolotherapy, and Platelet Lysate procedures.

We utilize the most advanced protocols developed by Regenexx™, the national leader in these techniques. Regenexx is considered the most advanced method of processing blood platelets and stem cells and this assures optimal therapeutic benefits. In fact, the Regenexx protocols that StemCell ARTS utilizes have the highest number of patients treated and the only outcome data available, in the country, on these procedures.

Contact us today to see if you are a candidate for this ground-breaking treatment.
