

Stem Cell Therapy

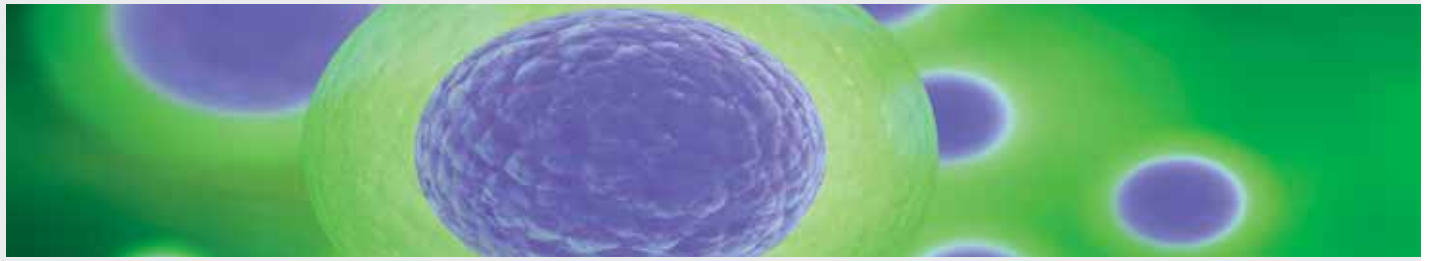

Avoid Invasive Surgery and
Painful Rehabilitation

STEMCELLARTS

The Art & Science of Regenerative Medicine

AN AFFILIATE OF NATIONAL SPINE AND PAIN CENTERS[®]

Stem Cell Therapy Aims to Harness Your Natural Healing Abilities

StemCell ARTS offers Regenexx™ SD as an alternative solution to invasive surgery for patients suffering from a wide range of degenerative conditions and injuries including:

- Torn Rotator Cuffs
- Knee Pain, Osteoarthritis & Meniscal Tears
- Hip Arthritis & Labral Tears
- Shoulder Pain & Tendinitis
- Chronic Neck & Back Pain
- Wrist, Elbow & Ankle Pain
- Achilles Tendinitis
- Foot Pain & Plantar Fasciitis
- Non-healing Fractures

The StemCell ARTS Difference

- Our providers have decades of experience and are highly regarded as significant contributors to advancing the techniques the “art” of regenerative medicine therapy.
- We have an advanced in-house laboratory that allows for custom-designed, individual treatments.
- Our superior accuracy and precision performance uses advanced imaging guidance and ultrasound techniques during procedures.
- We utilize a sophisticated tracking registry of patient treatments and outcomes.

How Stem Cell Therapy Works

StemCell ARTS uses a revolutionary new treatment method using a patient's own stem cells. Our body's stem cells are responsible for healing us. Use of our body's stem cells can actually heal damaged tissue, tendons, ligaments, cartilage and bone while decreasing downtime and avoiding painful rehabilitation periods typically associated with surgery. As we age or sustain injury, we sometimes cannot get enough of these healing cells into the injured area. In a series of three injections spaced roughly two to five days apart, the patient can be well on their way to a full recovery.

Stem Cell Therapy Treatment Overview

	Pre-Injection	A dextrose solution that stimulates surrounding soft tissue & prepares it for stem cell procedure.
Same Day	Stem Cell Aspiration	Blood and bone marrow samples are taken.
	Stem Cell Re-Injection	On the same day, stem cells and platelet stimulants are introduced into the injury site.
	Post Injection	Additional platelet stimulants are introduced to invigorate stem cells and boost healing process.

Why Choose StemCell ARTS?

Our medical leaders at National Spine and Pain Centers have established StemCell ARTS, a program that offers the most cutting-edge regenerative therapies in the Mid-Atlantic region. At StemCell ARTS, we not only have a team of Top Doctors* to treat you, we offer the latest in advanced biologic solutions such as Stem Cell Therapy, Platelet Rich Plasma (PRP), Prolotherapy, and Platelet Lysate procedures.

We utilize the most advanced protocols developed by Regenexx™, the national leader in these techniques. Regenexx is considered the most advanced method of processing blood platelets and stem cells and this assures optimal therapeutic benefits. In fact, the Regenexx protocols that StemCell ARTS utilizes have the highest number of patients treated and the only outcome data available, in the country, on these procedures.

Contact us today to see if you are a candidate for this ground-breaking treatment.
